For boilers built prior to about mid 1998, we should supply the Sherwin-Williams Product Code number: S/W F75-XXG-7246-4331. This is high gloss, high VOC content paint that is classified as a maintenance paint under the clean air rules. From mid 1998 onward we should supply the Sherwin-Williams Product Code number F77-VXG-14282-4331. This is the high-solids, low VOC content paint that we are currently using. Sherwin-Williams blending stores will recognize the product code number which contains the location code (4331) of the originating store. Any blending store will know how to contact the Grandville, MI store to get the blending details. XID & DA gray paint is S/W F77-VXA-10098-4331 (burner only orders also).
